Kathy Talks About Her Experience With Skin Cancer

The Process:

“Dr. Rosio was very comforting and reassured me that it was curable through Mohs Micrographic Surgery.” – Kathy G.

About a year ago, I noticed a small fever-blister looking growth above my upper lip. I did not think anything of it. I thought it would go away. At times I thought it was a pimple, but it would grow & shrink yet it never went away.

I decided it was time to get it checked, so I went to look for a Dermatologist. There were 3 choices close to where I live. I chose Dr. Rosio in Folsom.

At my visit, he took pictures & did a biopsy, which came back positive for basal cell carcinoma! Needless to say, I was shocked and worried. Dr. Rosio was very comforting. He reassured me that my cancer was curable through **Mohs** Micrographic Surgery.

I scheduled an appointment immediately & had it removed within weeks of my diagnosis. On the day of surgery, after 2 passes to remove the cancer, I had a dime-size hole in my upper lip. I could actually feel it when I ran my tongue along the inside of my lip!

It has been about 6 weeks now & I am amazed at the healing process. If I did not tell you where to look you would never know. Dr. Rosio did an *amazing* job of reconstructing my lip after removing the cancer.

“If I did not tell you where to look you would never know.

Dr. Rosio did an *amazing* job of reconstructing my lip after removing the cancer.”

As a credentialed high school teacher, I have been able to use my experience educating teens about the importance of good skin care. Everybody needs to know that early detection and diagnosis are very important in the treatment of all skin cancers. Don't wait! Schedule an appointment today to see Dr. Rosio if you have any abnormal tissue growth on your skin! And don't forget to wear your sunscreen!
